

# K-Nite<sup>™</sup>

## WATER SOLUBLE POTASSIUM NITRATE

**NITROGEN AS NITRATE (N) 13.7%**  
**POTASSIUM (K) 38.4%**

A fully water soluble fertiliser containing Nitrogen and Potassium recommended for vegetables, fruits, flowers, turf, vines and ornamentals grown in soil and soilless culture.

The Nitrate Nitrogen improves the uptake of Potassium to the plant. K-Nite<sup>™</sup> is greenhouse grade, chloride free and contains immediately available Nitrogen and Potassium.

K-Nite<sup>™</sup> is also suitable for application via irrigation systems (fertigation) and foliar application. It dissolves rapidly and completely and remains in solution ready for root adsorption or is taken in via leaf surfaces. Timing of applications are suitable at any time during the season, however K-Nite<sup>™</sup> has a special fit in the later stages of crop development, where demand for Potassium is greatest.

K-Nite<sup>™</sup> is particularly important for:

- Improving yields
- Fruit and vegetable size, sugar and colour development
- Flower development of fruit trees and ornamentals

Nitro Ag K-Nite<sup>™</sup> is not:

- Affected by temperature, so nutrients are still available when conditions are cold and wet
- Acidifying to the soil
- Lost to the atmosphere like Urea or Ammonium based fertiliser

Before application, seek advice from your supplier or local agronomist.
