

NitroSOP[™]

WATER SOLUBLE POTASSIUM SULPHATE

POTASSIUM (K) 42.3%
SULPHUR (S) 18%

A fully water-soluble, chloride free fertiliser containing immediately available Potassium and Sulphur recommended for vegetables, fruits, vines, flowers, turf and ornamentals and soilless media.

The salt index of NitroSOP[™] is lower than MOP (Muriate of Potash) and even lower than NOP (Nitrate of Potash), making it desirable as a Potassium fertiliser.

NitroSOP[™] is suitable for application via irrigation systems. It dissolves rapidly and completely and remains in solution ready for uptake via the roots.

NitroSOP[™] is particularly important for:

- Peak demand periods for Potassium
- Where Potassium and Sulphur are required but Nitrogen application is being kept to a minimum
- Fruit and vegetable size, sugar and colour development
- Flower development of fruit trees and ornamentals

Before application, seek advice from your supplier or local agronomist.
